

# P.I. GROWTH THROUGH AI-DRIVEN FORENSIC DOCUMENTATION

## EXECUTIVE SUMMARY

You're leaving \$665 – \$2,000 per case, tens of thousands in case value, and attorney referrals on the table—and it's not the injury.

Most doctors document PI cases and write reports the same way—using the same familiar approach—an EMR, sometimes supplemented with tools like ChatGPT. That method is consistent—but consistency is not the same as effectiveness which is exactly why cases get reduced, value is never fully captured, and attorneys rarely tell you that your reports do not fully support the case in a way they can rely on.

The signs are rarely explained, but they are:

- referrals that plateau instead of grow
- pressure to reduce fees
- or a lack of consistent referrals and follow-through from attorneys.

The issue isn't the way you treat or the care you provide. It's that your findings are not being structured, measured, and translated into value.

## INTRODUCTION

This is where AI changes everything—not by replacing what you do, but by transforming it. You don't have to change your EMR and it doesn't interfere with your workflow.

**AI turns the clinical records you already have into forensic grade reports attorneys seek that shows:**

- The full effect that injuries have on the injureds life
- Measurable human life functional loss (HLFLI) index
- Structured life impact (AQDL) adjusted quality of daily living
- AI-automated impairment ratings

- “Present-value” that attorneys need to increase case value
- AI-driven, billable PI services
- Forensic reports attorneys can actually use to support their cases

When this is done correctly, it changes both the case and your practice.

*Examiner360 is the AI tool.*

*The value is how you use it.*

## **CORE FINDINGS**

**You no longer have to leave \$600–\$2,000 per case, tens of thousands in case value, and attorney referrals on the table—and it’s got nothing to do with the injury.**

Most doctors have great EMRs and document the case. Very few structure it to increase value, generate AI-billable services, and become indispensable to attorneys. That's the gap AI is closing.

### **Your EMR Documents the Case. It Does Not Value It.**

Most PI narratives describe symptoms, treatment, and complaints. They do not quantify impairment or functional loss, translate life impact, or express the injury in **present-value terms**. That is where cases lose value. And that is where practices leave revenue behind – not just case value or missed AI-billable services but also from missed attorney referral opportunities.

**This is where AI changes everything**—not by replacing your work, but by translating it into:

- Measurable loss
- Forensic-level reporting
- AI-driven billable PI services
- Stronger attorney positioning
- Increased case value
- Increased practice value

**[Watch the Video](#)**

## **WHAT'S MISSING IN YOUR EMR IS THE PART THAT CREATES VALUE**

Your EMR may show:

- Diagnoses, treatment, modalities, prognosis and MMI
- Pain complaints
- Range of motion restrictions
- Treatment dates
- Subjective reports
- SOAP notes

But that is not enough. Those records usually do **not** show:

- Impairment in a structured way
- Measurable functional loss
- Quantified life impact
- Present-value economic loss
- Forensic support for attorney valuation

Even when the injury is real, the case is still vulnerable to being framed as:

- "Subjective"
- "Soft tissue"
- "Resolved"
- "Not supported by objective findings"
- "From pre-existing or prior accidents"

This does not translate the injuries into value because the record was never built to show value.

## **THE STRUCTURAL SHIFT**

**Description Does Not Create Value. Structure Does.**

The moment a case moves from narrative description to structured analysis, everything changes. Instead of simply documenting symptoms, the case begins to show:

- What function was lost

- How daily life was affected
- How long the impact continues
- What those losses represent in measurable terms

That is the difference between a file that gets interpreted... and a file that carries weight.

## **SOLUTION: WHAT THE EXAMINER360 AI SYSTEM DOES**

1. AI Translates Medical Data into Measurable Loss
2. Adds Value to Cases
3. Adds \$665 To \$1,650 Revenue Per Case in AI-Billable Services
4. Increases Attorney Referrals

This system was built to do what ordinary documentation cannot do. And it works alongside your EMR without changing it or interrupting your workflow.

It takes the medical findings already in the case and translates them into a forensic structure that attorneys can use and insurers cannot easily minimize.

## **The Five-Forensic Layers and AI Process**

- 1. Trauma Inventories**  
Electronic patient reporting outcomes (ePROs) unlock overlooked diagnoses
- 2. Impairment**  
Establishes the medical anchor
- 3. HLFLI**  
Measures loss of human function
- 4. AQDL**  
Quantifies life impact, including pain, emotional effect, and cognitive disruption
- 5. Pain & Suffering and Emotional & Cognitive Distress Translation**  
Converts the effects of injury into measurable losses

This is not just documentation. This is how injury is translated into value.

## **WHAT THIS MEANS FOR THE CASE**

### **When Loss Is Measured, Cases Are Understood Differently**

When your work is translated into structure, attorneys can show:

- Functional loss
- Whole-person impairment
- Life impact
- Non-economic effect
- Loss of services
- Present-value damages

This changes the way the case is positioned—not because anything is being added, but because what was already there is finally being expressed correctly.

## **WHAT THIS MEANS FOR YOUR PRACTICE**

### **This Is Not Just About Better Reports. It Creates New Revenue.**

Once your practice begins using AI to structure and translate injury, you create services that were never available through routine documentation alone.

#### **AI-driven billable PI services include:**

- Trauma inventories
- Impairment ratings
- Injury model exams
- Forensic-level reports
- Structured valuation support

That means your role changes. You are no longer just documenting care. You are producing information that directly affects how the case is understood and valued.

That creates:

- More billable services
- More attorney reliance
- Stronger differentiation

- More business development opportunities

## **MARKET REPOSITIONING**

### **Some Doctors Are Still Writing Notes and Narratives. Others Are Building PI Enterprises.**

Right now, there are doctors using AI-driven forensic structure to:

- Reposition themselves with attorneys
- Generate new billable PI services
- Increase the value carried in the record
- Build practices around measurable case support

Others are still relying on standard records that never fully express the loss. The gap between those two groups is widening. Examiner360 is available to both. The difference is who uses it.

## **ATTORNEY POSITIONING**

### **Attorneys Don't Need More Notes. They Need Better Proof.**

Attorneys are not looking for one more provider who documents treatment. They are looking for professionals who help solve their biggest problem: *undervalued injury claims*.

When your reports show structure, measurable loss, and value-centered analysis, your position changes. You become more than a treating doctor. You become part of the case strategy.

That is where attorney relationships strengthen. That is where referrals increase. That is where your practice grows.

## **THE CORE IDEA**

### **Examiner360 Is the Tool. The Value Is How You Use It.**

AI does not replace your judgment. It does not replace your EMR. It does not interfere with your workflow. It gives you the structure to turn your findings into something far more powerful:

- Defensible
- Measurable

- Attorney-facing
- Value-centered
- Revenue-producing

That is how cases change. And that is how practices change.

**See the forensic report - watch the video**

## **BUSINESS TRANSFORMATION**

### **Converting Your Business into an Enterprise: Building a PI Practice That Carries More Value**

*If your records are not structured to measure loss, the case is easier to undervalue.  
If your work is not translated into attorney-facing value, your practice is easier to overlook.*

The Examiner360 system changes both.

See how cases are analyzed, structured, and translated into measurable value and learn how the system works. Discover how doctors are using AI-driven reports and billable services to build stronger PI practices.

## **CONCLUSION - A NEW WAY TO DO P.I. BUSINESS**

### **If It's Not Measured, It's Undervalued.**

Your EMR may document the case. The Examiner360 system helps you **value** it.

The pathway forward is clear: AI-driven forensic documentation transforms ordinary medical records into powerful instruments of case valuation. By implementing structured analysis alongside your existing EMR, you position yourself not merely as a treating provider, but as an essential strategist in case development and valuation.

The software is available. The question is not whether AI can enhance your practice—it demonstrably can. The question is when you will implement it.

## **ROI – Calculated at 2,000%**

Examiner360 doctors report coding and billing the trauma inventories and the impairment rating starting at \$665. On each case.

Many are coding and billing for the Injury Model Exam, forensic report and functional testing, up to an additional \$2,000.

Do the math.
